## IP Trunking

Now you can make your move - and do it on your own schedule.

If you run a business, particularly a small or medium-sized business (SMB), you are probably weighing how you can economically and easily migrate to the benefits of a VoIP solution while not immediately abandoning the investment you have made in your existing PBX/Key system and handsets.

IP Trunking from TeligentIP is the solution that will allow you to make that move by giving you the ability to :

Purchase a limited number of lines to match your communications costs closely to your actual business needs

Provide new generation network to enhance your mobility by leveraging IPitimi's national network

Consolidate your data and voice bills to lower expensive phone bills due to long distance calls and the taxes that go with them

Streamline your communication platform and enjoy immediate and significant economic advantages while smoothly transitioning to a hosted VoIP service

Leverage your existing Internet connection for both data and voice while providing the ability to add enhanced calling features not already provided by the existing PBX or Key Set

## Why IP Trunking?

Making your move to VoIP is not as challenging a proposition as you might think. Most companies voice and data reside on separate networks within the infrastructure, with separate cost centers and, usually, separate support staffs as well.

However, with IP Trunking implemented at your PBX site, all of that changes by leveraging your data connection to simultaneously serve both your data and voice needs.

IP Trunking and A la Carte Services. IP Trunking services can also be ordered with powerful Class 5 user feature overlays such as Call Forwarding, Simultaneous Ring and Sequential Ring. These advanced features can be used to supplement those features not already provided by an existing PBX or legacy phone switch.

The Summary of IP Trunking. Whether SIP trunks are your first step in planned migration to hosted, or your final solution into your own system, SIP Trunking facilitates the changes you need to make your business more profitable and competitive. It allows you to make your move right now, and establish a platform that will serve your expanding business requirements by:

Leveraging your existing data connection to connect your PBX to our proprietary network, enabling more economical telecommunication services

Facilitating a “cap-and-grow” strategy while transitioning to VoIP, as well as facilitating your long term objectives of moving to a wide range of possibilities that include premise based or hosted
