WHY VOIP (VOICE OVER INTERNET PROTOCOL)

Several years ago, a consumer connected to the Internet over their phone line. Today, however, consumers can use their Internet connection for theirphone service. This is possible because of the network infrastructure that telecom companies have built over the past decade completely replacing the traditional telephone infrastructure as we know it.

Now you can talk on the phone at the same time that you are surfing the web, or sending and receiving emails. There are also several other distinct advantages of VoIP compared to traditional phone service:

✓ Coverage. Your phone service becomes global. With a VoIP phone, you can now plug your phone into any broadband internet connection in the world without any additional fees, long distance or roaming feesthat are assessed on traditional phone service.

✓ Flexibility. VoIP service allows for real-time changes to your phoneservice. You can log-in and customize the service to suit your exact needs.

✓ Lower Costs. Greater efficiency and eliminating the need for a dedicated phone line means lower cost to the end user.

✓ Better efficiency. If your old Dial-Up Internet was limited to the same slow speeds that your old phone service allowed, imagine what it is doing to your voice phone calls? VoIP phone calls are placed over your broadband connection, which provide much faster connectivity speeds and much higher clarity. It's High Definition for your phone calls.

✓ Control. No more waiting on the phone for a customer service representative to add or make changes to your account. You can change call forwarding, listen to voicemail or view your bill immediately.

SIP TRUNKS

Whether you are ready for all that VoIP offers or not, youcan still leverage the advantages of this technology by switching your phone lines, PRI or business trunks to SIP Trunks (Session Initiation Protocol). TeligentIP can help you determine the best way to cut costs and increase efficiency of your system including legacy PBX and key systems to the most advanced SIP ready telco systems on the market. We have helped clients implement from 1 to 1000 trunks or more. We also have wholesale SIP Trunks available if you are an emerging communications provider or a call center with millions of minutes.

Our **SIP Trunks** are already certified to work with the industry best platforms and Unified Communications systems including: Microsoft Lync, Avaya IP Office, Cisco Unified Border Element (CUBE) with Cisco Unified Communications Manager (CUCM). We have Unlimited plans or aggressive pay per minute plans for large users.

Add Toll Free numbers or local DID's (Direct Inward Dial) phone numbers from any of our markets to ring your office, regardless of where you are located. Complete the form for a free quote or call **1-855-474-8464** to speak to a consultant.
